Former Indiana Editor Writes From His New Home On a Western Ranch.

Lewistown, Montana. To the Editor:-

It has been a little more than a year since I turned a deaf ear to Indiana pilitics, handed over to a younger brother my Pulaski county newspaper, sold my home upon the banks of the Tippecanoe and with my family bade my host of good friends in Indiana good-by, to join the legions of enthustastic easterners enroute for the vast and boundless West, which in Indiana seemed to be far away and so beyond the pale of civilization.

For years I had experienced that desire for larger ownership of land, which is inherent in the human breast. For years I had read with avidity, the "Westward Ho" and the "Back to the Farm" articles which have occupled so important a place in our current literature. In making the decision to cut loose from the old ties which had been so pleasant, and which were in a measure, so satisfactory, I confess to a certain amount of dubiousness, as I carefully investigated the possibilities afforded in the different sections of the West, until I visited the Judith Basin in central Montana. Then I became all enthusiasm After living here for more than a year and identifying myself with this sec tion of the country, and having become more closely acquainted with conditions and opportunities, I congratulated myself over and over again upon my decision, and am more convinced than ever that the valleys of central Montana offer to the ambitious man of the east, who possesses the habit of industry, a hundred opportunities in whatsoever field he may desire to en gage, to every one he will meet with

After v determination to move .ecome public, I was greatly surprise. to learn from friend after friend, not only in the county where I had lived for eleven years, but from friends in the scattered parts of the state, that the western land germ was even then working in other minds than mine. Farmers, lawyers, physisuccessful in their respective commu nities, were either seriously consider ing moving West, or thinking of in vesting in farm lands there, where the rapid development of the country often in a short time doubles and trebles the value of land. To many of these I promised to write later, as I became better acquainted with the country, and since coming here, I have received many letters of inquiry. Because it is out of the question to go into all the interesting details regarding the western country, in personal letters to these friends, this letter from a loyal Hoosier son is written for publication giving a general view of this western country, and partie ularly of this Jucith Basin in central Montana

First let me correct a common mis apprehension regarding the climate of Montana. I have lived here through two winters, one of which was said by old settlers to have been more severe than usual. We have more snow here than in Indiana, and there are periods of short duration now and then when the temperature drops to a lower mark than is ever reached in Indiana. But these periods are infre quent, and because of the high altitude and rare atmosphere and the sunshine which is warmer than in the Central States, one can do outdoor work here without discomfort when the ther mometer registers ten and even twenty below zero, whereas in Indiana it is impossible to do outdoor work in sero weather without suffering. In ther words, so far as one may judge he his some of facility, top dogr

LETTER FROM MONTANA above zero is more uncomfortably ed the early years, the homeseeker bound Box Co. by Richard G. Inthe Lake Erie & Western railroad able to tell as a result of the persee what has been done by the have had after all, but few of these cold days during the two winters. Most of the days are bright, warm and sunshiny. I have seventeen head of cattle, and nine horses. All winter these have been runing on pasture, and except for about three weeks in December and January, even the milk cows found good grazing. A local butcher recently looked at my cattle and said all the cows were fat enough to beef. The ground was thawed and we did our first plowing in sod this season on February 17th. The most favorable winters in Indiana and Illinois would hardly equal that. I find easterners are all happily disappointed to learn that Montana winters are not nearly so vigorous as they have been led to expect, nor are they as cold and stormy as the winters in the Dakotas and Minnesota.

A comparison of the springs, sum mers and falls of Montana with the same seasons in the middle states leaves every consideration in favor of the Montana climate. The springs and falls are delightful. They are not sloppy with frequent rains, but cloudless skies, bright warm sunshine and balmy bracing mountain air make each day a new delight. The summer days are hot, but with always a cool breeze blowing, and every summer night is so cool that one sleeps comfortably under a couple of heavy blankets. The altitude is high, the air is dry and invigorating, the whole year around, and the climate healthfu! There is no malaria, asthma, hay fever, nor grip, and even the cough or cold so common, particularly among children in the Central states, is aimost wholly unknown. In fact there

is almost no sickness of any kind. The U. S. Weather Bureau reports show that there are many more sunshiny days in Montana than in the Central States. One must live here and see the wonderful crops of grains and vegetables, and witness the vigor and health, and high spirits of the people to properly appreciate the delight and the better health, and the practical value in dollars and cents this extra sunshine supply means to the people who enjoy this rich gift contact. He will be greatly missed

And while there is more of sunshine "To live in hearts we leave and less of rain and snow, there is ample moisture in all parts of the Judith Basin to produce the most wonderful crops I have ever seen. Providence is unusually kind in the way of throughout the country immediately cured of a severe case of kidney and levelling up and will now figure rainfall to central Montana farmers and early summer just at the right pains in my back, and the kidney actime to grow the crops and to fill to tion was very irregular. I took make the vegetables gnow quickly to perfectly well and feel like a new the advantage of their texture and flavor. Then in late summer comes less rain, making conditions ideal for putting up the hay crop, for harvesting and threshing and for other fall

I have known it to melt a heavy covering of snow over night, and to raise the temperature sixty degrees in a few hours. or black clay loam, containing pebbles or small slivers of lime rock. The small stones do not interfere with th cultivation, but disintegrate when exlization. The sub-soil is a rich clay place also.—Culver Citizen. mixed with many small lime stones. The lime in this soil neutralizes acids that are injurious to plants. We are also told that it makes conditions Ind., has found Foley's Honey and is pure, contains no opiates, and has more favorable for bacterial action; Tar Compound to give such good re- healing and curative qualities. Such and it renders available small percent-sults that she uses it for all coughs a medicine is Foley's Honey and acid and potash. The first foot of and colds with the best results. She Tar Compound for croup, whooping Judith Basin soil contains from 1 to says "I wish to recommend Foley's cough, bronchitis, and all affections 1.5 per cent lime and the second foot Honey and Tar Compound. It is of the throat, chest, and lungs, from 15 to 20 per cent. Soils that the only thing I ever found to re- Best and safest for children and

One-tenth of one per cent nitrogen is considered satisfactory but the soil of the Basin averages 1.6 per cent for the

first foot and 1.4 for the second foot In this region one has no stumps to pull, no stones to blast, no brush to clear, no clay knobs to wash, no swamps to drain. Nature has prepred rolling prairies, low lands and benches, all covered with a luxuriant growth of native grasses, ready for the coming of the eastern farmer with his breaking plow. This explains why profitable crops may be raised on a large scale the first season.

A common misapprehension regarding the West that is held by many people in Indiana and other eastern states, is expressed by the term "wild and wooly." That may have applied at one time, but it now fits this portion of Montana about as well as it would substantial old Wayne or Montgomery counties in Indiana. In fact, most of the people one meets with in the Basin are from Indiana, Ohio, Illinois and other eastern and central states. Those who are rapidly becoming the owners of this great new country comprise experienced farmers and stock raisers. bankers, storekeepers, railroad men. former clerks and employees in mercantile and manufacturing institutions of the east.

With the rapidly increasing farm population, the demand arises for new elevators, stores and trading points, and capable men in the professions. The new towns that spring up into wide-awake villages of importance. seemingly almost over night, and the rapid and healthy growth of the older cities and towns, offer unusual opporreceive thirty cents per hour and farm help commands \$40.00 to \$50.00 per
